

Burntsand Sponsors sold out UXCamp Vancouver Dec 5, 2009

Panels and Presentations

In the morning was a presentation about Remote Usability Testing, and a look at the recent Museum of Vancouver experience redesign. There were two panels: User Research, which explored the different ways we seek out information and feedback from our users, and Tools of the Trade, which covered an array of UX tools (wireframing, testing, etc.).

Demos and Breakout Sessions

The downstairs area of the VFS Cafe was reserved as a space for demos and small breakout sessions throughout the day. People who had some cool work to show off, or an idea to brainstorm, brought them along!

Unconference!

If you're unfamiliar with the unconference format don't worry, it's not that scary! It just means that YOU make up the conference program for the afternoon, and we talk about what the participants want to talk about. There was a scheduling jam right after lunch, where everyone who wanted to could pitch an idea for an afternoon timeslot. Participants' Powerpoint/Keynote slides are available online after Saturday, hosted at uxcampvancouver.org.

Refreshments

Thanks to a couple generous sponsors, we are able to provide both a morning and afternoon coffee break with some caffeinated beverages and treats. However, everyone was on their own at lunchtime. Check the website for a list of some nearby restaurants.

What To Bring

You need not bring anything but yourself, but here are a few other things you may want to have with you...

Laptop

Wifi was available – password was provided upon arrival on Saturday. Also, for unconference presentations, there were two theatre spaces with projectors. If you have a Mac laptop and want to present, make sure you bring your VGA adapter.
